Final version after processing the resu		<u> </u>		Colour Legend							
This will become a collection of all tab	les; after reviewi	ng per item		Row colours		mandatory/recommended/optional colum					
Review the sheet Sunflower_Sample_	-			Confirmed element	ts	mandatory and mandatory	if applicable				
Please leave comments including you				Newly added element	ents - for						
If done with review (even if no remarks	s/comments) add	your name below under Review	vers of this version	review		recommended					
						optional					
Note: The HealthDCAT-AP column will be class (new class name for Submitter) sinc of a dataset. For other classes we only prospecific concept can be harvested/used to	e that class is all a ovide an entry in th	bout metadata during submission nis column if information of that									
						conditional					
Note on mandatory fields with lists (but no	t strings): also HL	7 NULL flavors will be allowed									
Version history; Items added per ve	rsion										
Items	Date version re	lease									
Submitter, Sample	2024-09-04										
Decision(s):	Date decision	Motivation/Information:									
Submitter should not be part of the minimal dataset. Submitter is part of metadata. Within UML-diagram this will be explicitely visualised	2024-09-18	Submitter of a dataset within GDI should not be part of the minimal dataset per se, it is the metadata provided to make clear who submits a dataset within GDI.									
The class "Submitter" was renamed to "Metadata Submission" to make it clearer it is a class concerning metadata.		The name of the class Submitter was confusing and wasn't properly representing the class.									
New class "Identification" was added. The class contains Identifier, Identifier Type and Name properties.	2024-10-02	Multiple elements about identifiers got feedback that only providing the ID is not sufficient. New class "Identification" was added, where other items can point to.									
The metadata submission was mapped to Health DCAT-AP.		In order to be compliant to the EHDS initiative, the metadata needs to be compliant to Health DCAT-AP.									
Additional items were added. These are mandatory items from Health DCAT-AP and items already included in the GDI MS8 deliverable.	2025-02-27	We started working on the metadata model in the diagram, available here. To make it clearer, all the items from the diagram are now included in this spreadsheet.
